Service Organization

Svendborg Brakes field service technicians ensure correct operation of brakes, hydraulics and SOBO® systems. A preventative maintenance visit minimizes downtime. Detailed service report including recommendations is always provided.

The Green Alternative

To focus on environmental issues, friction materials for both SB1002 and SB1003 are developed according to the REACH legislation. They are Asbestos Free and contain less than 0.1% of Mercury, Chromium 6+ and Lead and less than 0.01% of Cadmium.

Limit Switches

Universal mechanical switching devices which present a large number of input shaft revolutions on the rotation angle of one single revolution of the cam discs. Applications include lifting, travelling and slewing gears of cranes, wind power stations, & bucket elevators.

Couplings

Ameridrives provides custom-designed, light weight couplings that are capable of transmitting high torques at high speeds while accepting significant levels of angular, radial and axial misalignment. Units require no lubrication and can be supplied with composite materials for electrical insulation.

Lifting Tool

Groundbreaking lifting and installation tool providing new standards in the removal and installation of yaw brakes - safe and fast! Using the tool cuts service time by up to 50%, reduces downtime, running costs and technician fatigue.

Brake Pads

Svendborg Brakes is a leader in the supply of friction materials; organic, sinter metal or application specific friction materials.

In a constant focus to avoid environmental impact, all our friction materials meet strict EU regulations.

24/7
SERVICE
SUPPORT

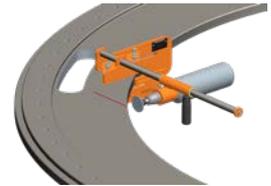

Service App

Download our Service App and you will get the choice of emailing or calling our 24/7 manned Service Support line. It is FREE to call - no matter where in the world you call from day and night 365 days a year!

OEM/OES Spare Parts and Accessories

Once you have purchased our solution and implemented it in your operation, the expertise of our unique after sales support will be there for you. Whether you need specific parts or an extensive parts package, including: Indicators, pistons, sealing, sensors, brake pads and discs.

Grinding Tool

Using its expertise on yaw brake noise, Svendborg Brakes has developed a unique solution that can be applied to the majority of installations; an Anti-Glazing Groove Procedure. By cutting a specially-shaped groove into the brake disc it is possible to remove existing glazing and prevent it from occurring in the future - thereby reduce noise to a minimum.

SOBO® iQ

Revolutionary soft braking technology. Safe and consistent stopping times independent of load, or for required stopping within a certain distance. The iQ represents the next generation state-of-the-art braking controller combining cutting-edge technologies.

Hydraulic Power Units

Proven through thousands of installations around the world, HPU's are available in a variety of models. Fast, controlled and safe braking!

R&D Engineering

Extensive testing in our full scale test center is second to none and your guarantee for top quality. We have a strong tradition for R&D investments and an invaluable accumulated know-how. Our focus on innovation and testing is core to our company.
